

Usage Ledger

31 AUGUST 2026

NINE PLATFORMS

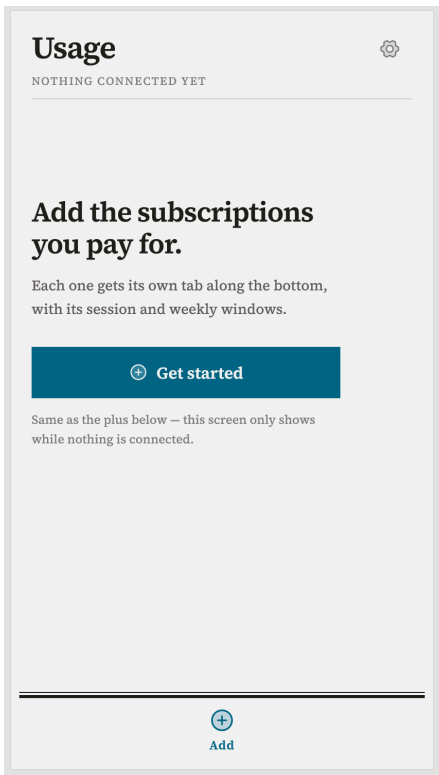

PHONE AND WATCH

One screen per subscription, answering one question: am I near my limit? Every window shows two things — the fill is how much you have used, the hairline is how much of the window has elapsed. Fill ahead of the hairline means you are burning it faster than the clock.

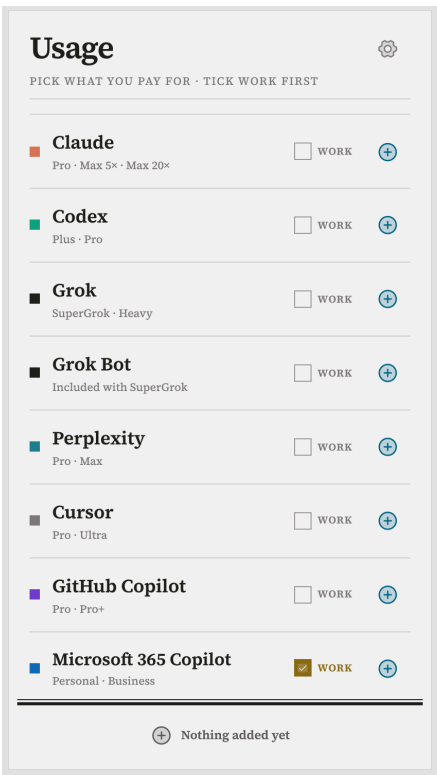

This is the screen record for the phone app and its Wear OS companion. Each screen carries the id it has on the design board, so a note against "4f" or "3g" points at one thing.

Adding an Account

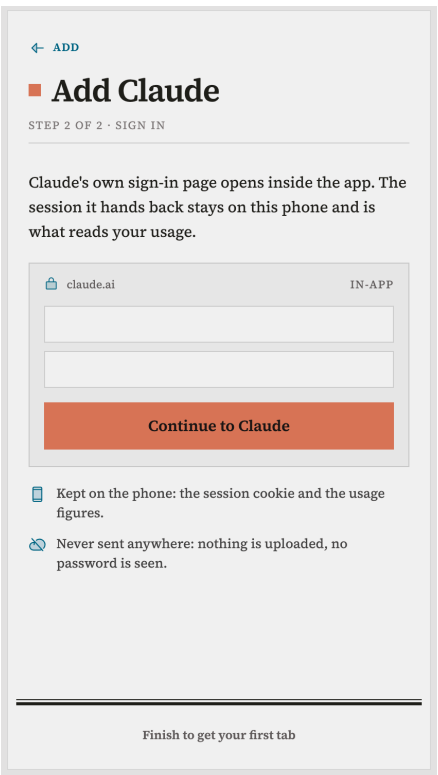

Linear, one account at a time, and one account per subscription. No tabs exist until something is added; afterwards the plus repeats the flow for the next platform — never the same one twice.

1a Nothing connected

1b Pick one, tick Work

1d Sign in, in the app

Add

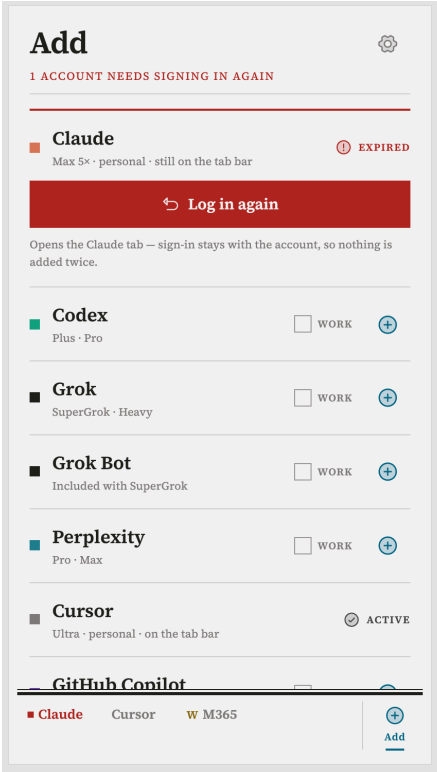

1e It becomes a tab

One Account per Subscription

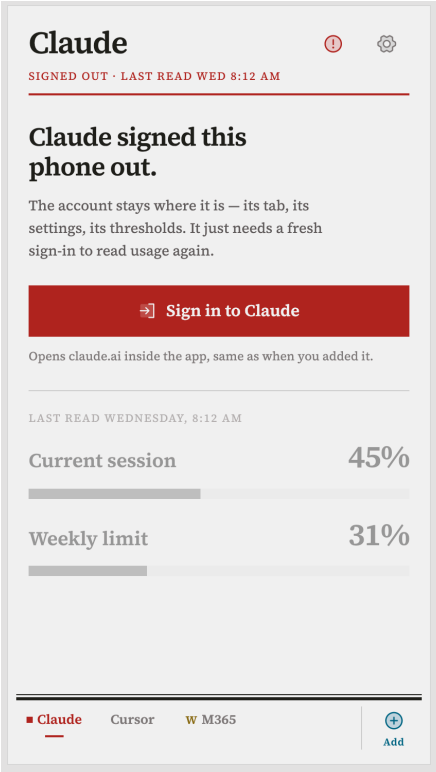

A subscription's sign-in holds one session at a time, so a platform connects once — not once for work and once for personal. The add list carries that state: a connected platform loses its Work tick and its plus and reads **Active**, naming the tab it already owns. When a cookie expires the tab stays in place and becomes a sign-in; the add list shows the platform as **Expired** with a Log in again button that only walks you to that tab. Nothing is ever added twice, and re-authorising happens where the account already lives. 1f replaces 1b.

1f Active — already a tab

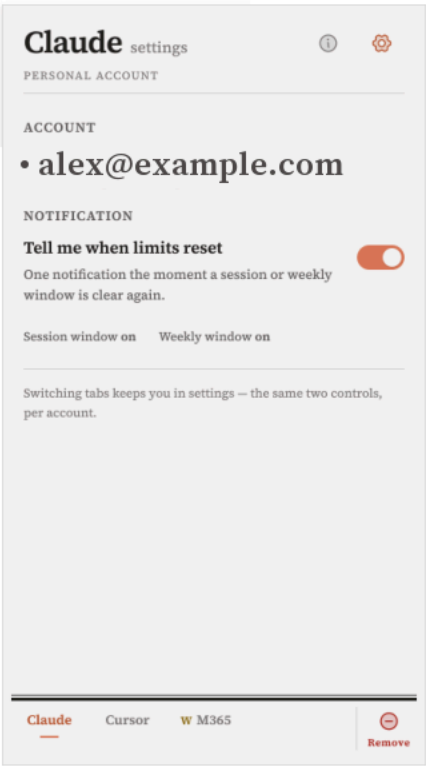

1g Expired — log in again

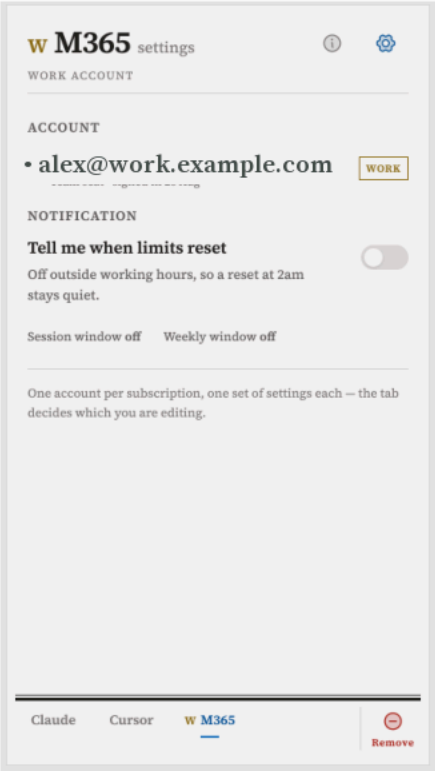

1h The tab signs in again

Settings and Information

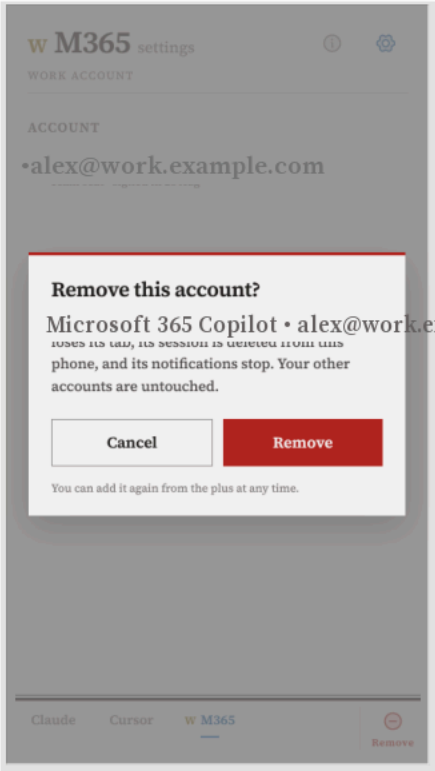

The gear enters a settings mode that rides the same tab strip, so switching accounts keeps the same two controls in the same place — one tab per subscription, never the same platform twice. The plus becomes a minus; the i opens a page outside the tabs.

Information

USAGE LEDGER · 0.4.2 BETA

What is this app?

A single place to see how much of each AI subscription you have used, and when the window resets. It reads your own usage page on each provider with the session you signed in with — nothing leaves the phone, and there is no account to make here.

Design philosophy

One question per screen: *am I near my limit?* So the app is set like a newspaper, not a dashboard — a figure you can read at arm's length, a bar for how much you have spent, and a hairline for how much of the window has elapsed. Fill ahead of the hairline means you are burning it faster than the clock. No charts on the front, no metrics you did not ask for.

Frequently asked

Why do I sign in inside the app?

The session has to stay attached to the app to read your usage. An external browser hands the session to itself, not to us.

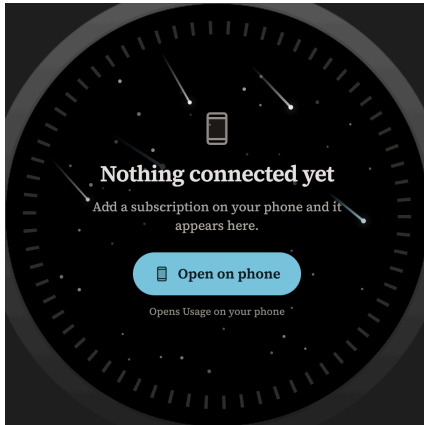

Where is my data kept?

On this phone, in the app's own storage. No server of ours ever sees it. Removing an account deletes its session and figures.

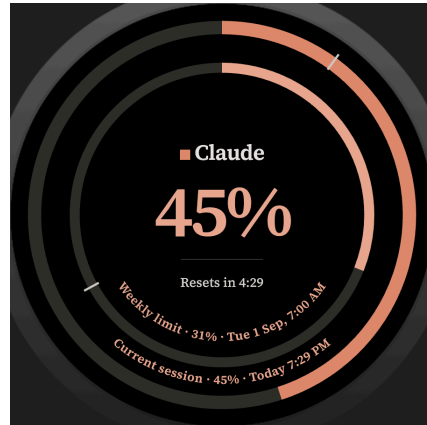

2d Information

Wear OS

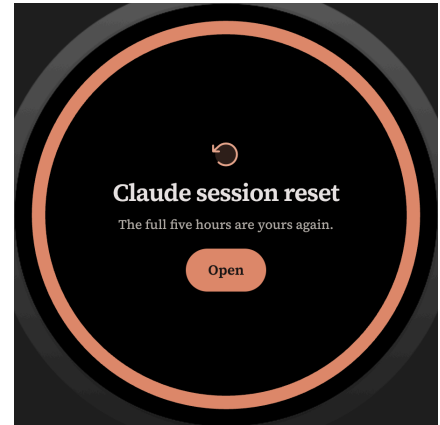

The bar becomes an arc and the hairline a tick on it. Wear is dark-theme only, so every face is black with the platform hues lifted to their lighter, less saturated steps. Faces are drawn at the real 454px display inside the 539px skin.

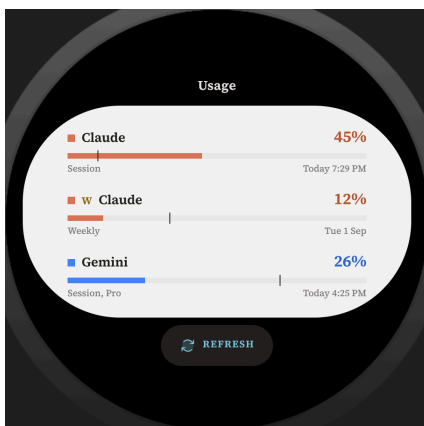

3g Nothing connected

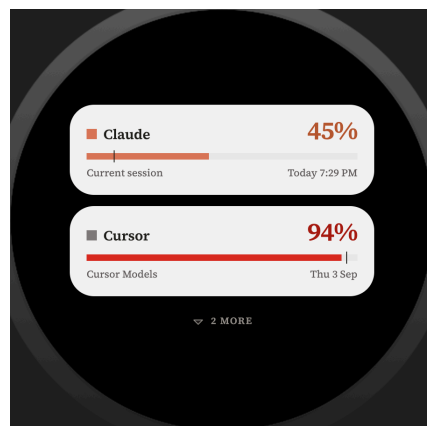

3a Two windows, two arcs

3c Reset notification

3f Tile — three sessions

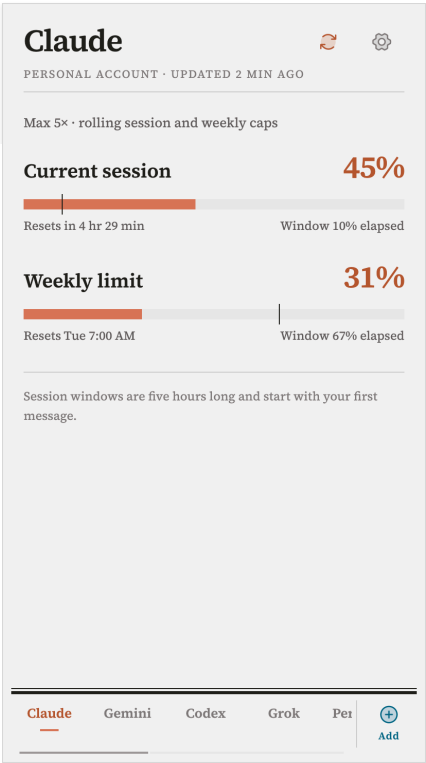

3e Tile — one per card

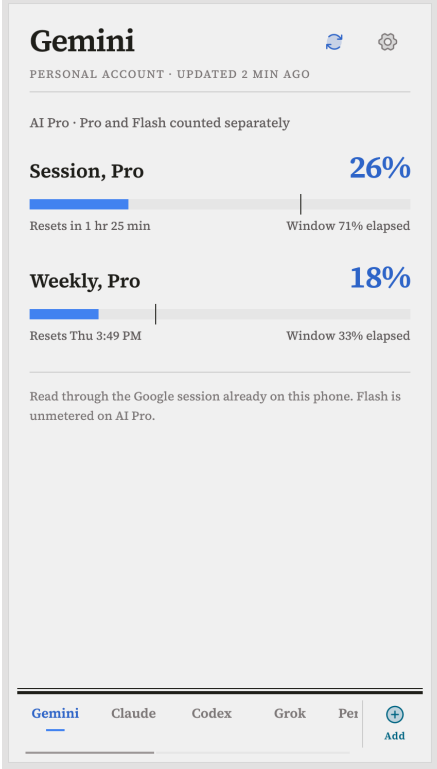

Tiles are ProtoLayout, not Compose — one screen, no scrolling, reached by swiping from the watch face. Both follow PrimaryLayout: title slot, main slot, one action below.

The Platform Screens

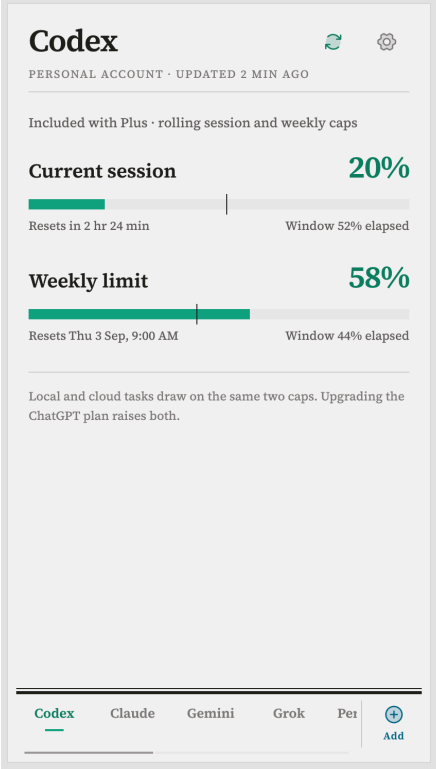

One grammar across nine platforms — a colour means a platform everywhere in the app, and only the window names change. Grok carries a single limit split by use; Cursor is shown at 94%, past the alert threshold, where the breached window drops its hue for alarm red.

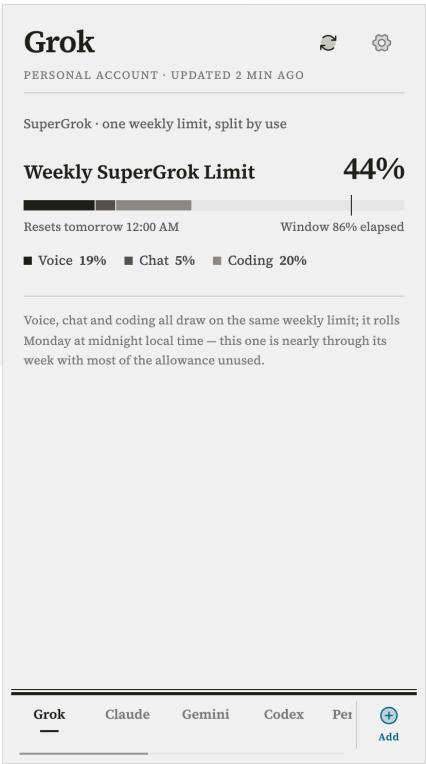

4a Claude

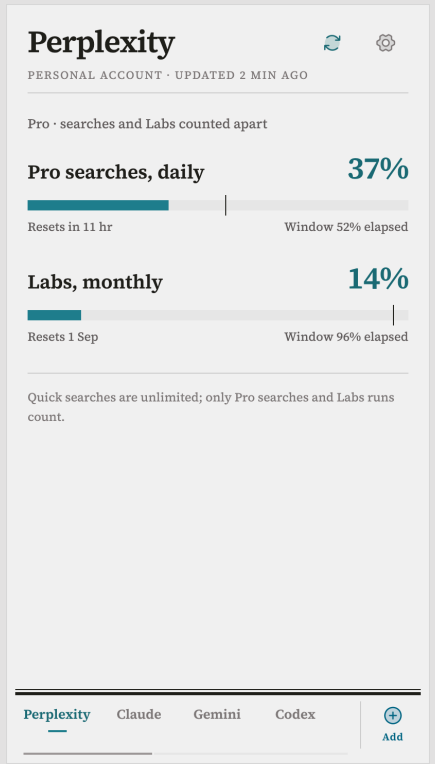

4b Gemini

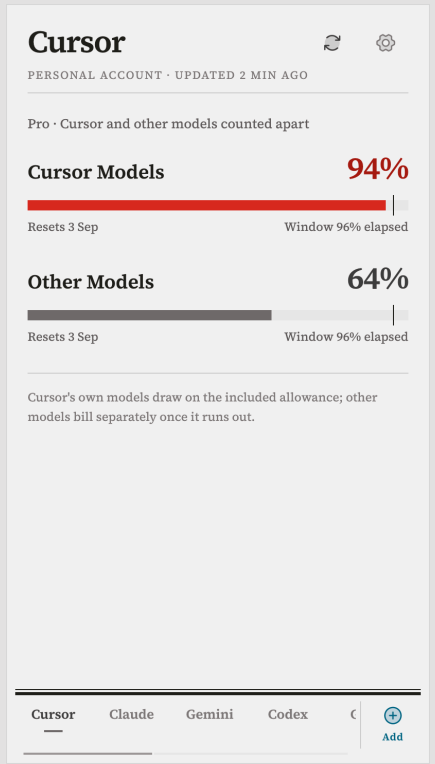

4c Codex

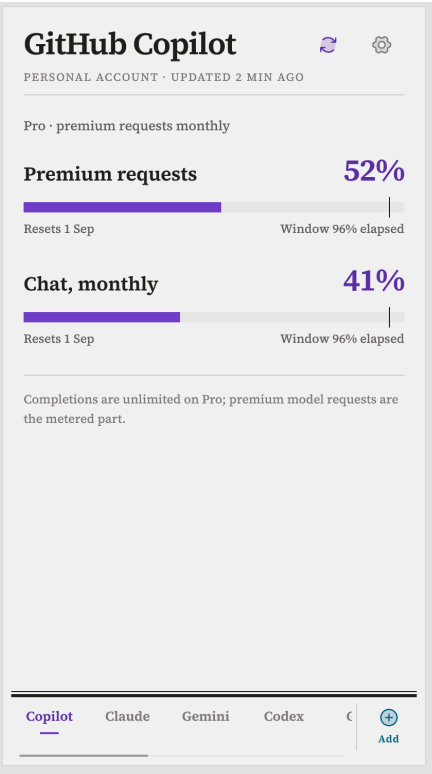

4d Grok — split by use

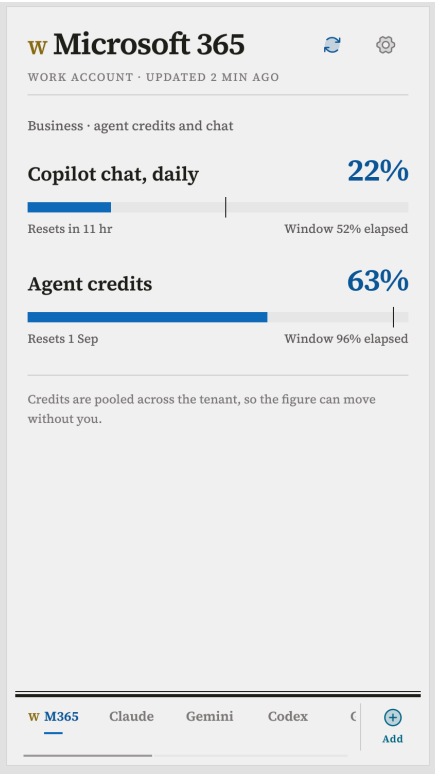

4e Perplexity

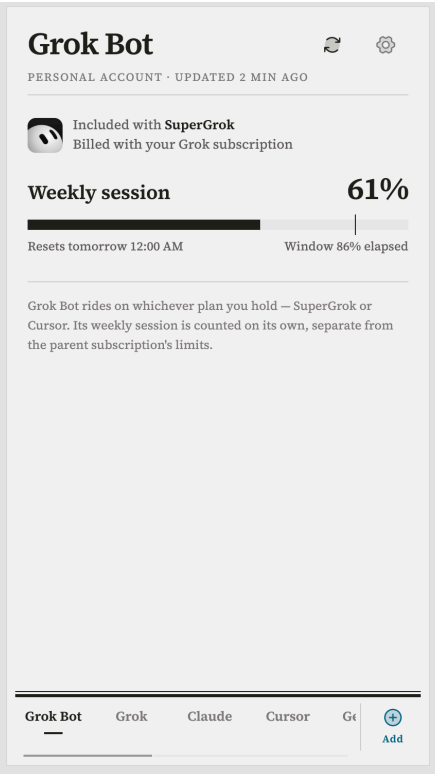

4f Cursor — near limit

4g GitHub Copilot

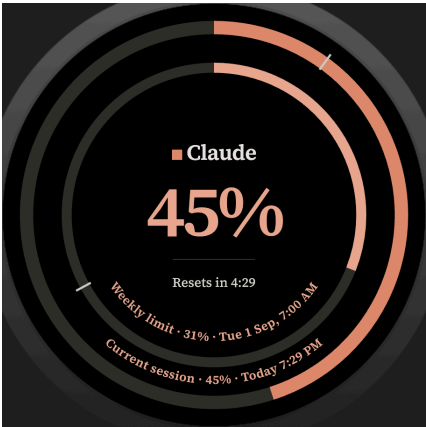

4h Microsoft 365 · work

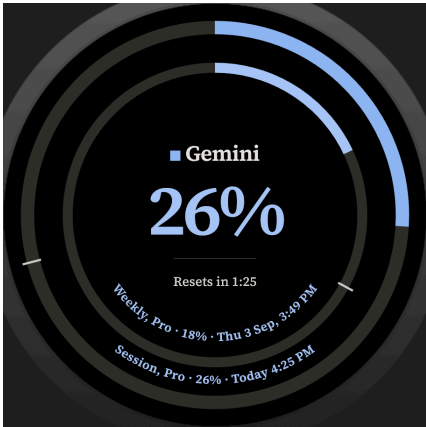

4i Grok Bot

Every Platform on the Watch

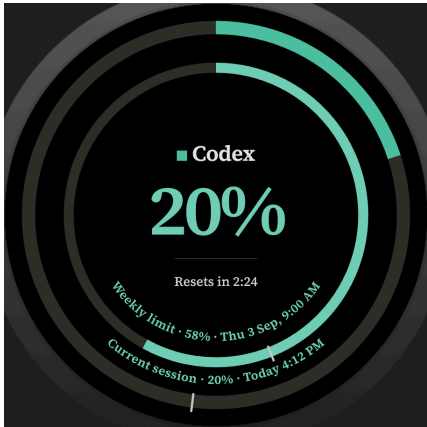

The same nine, translated to the round face. Where a platform has two windows the shorter one takes the outer arc; each arc is named on its own curve at the foot of the face, with the reset time reading Today or Tomorrow inside 48 hours.

4g GitHub Copilot

4h Microsoft 365 · work

4i Grok Bot — mark centred

The Colour System

Each platform is a press ink, with a deeper step for the display figure so it holds on paper. Cyan is the only interactive colour; red appears only on breach and gold only on work accounts.

ROLE	BAR	FIGURE	SWATCH
Claude	#d97757	#b8552f

Build notes

The phone screens are Compose with Material 3 — tabs scroll, the plus stays pinned. The watch app is Wear Compose, but the two tiles are ProtoLayout, a declarative subset where arcs are *ArcLine* rather than a Composable.

The supplied skin is a 454px round AVD: point an emulator at it to preview at true size. Hand over this record and the assets rather than the board's markup — Compose is a different layout model, and a port fights it.
